

## STERIS PATIENT WARMING SYSTEM

- Supports efforts to reduce perioperative hypothermia
- Durable, reusable heating system integrated into the surgical table mattress pads
- Uses conductive, not convective, heat transfer through direct contact with the patient
- Compact design, seamless OR footprint, quiet operation & no blowing air
- Provides heat to the patient before, during or after procedures in the operating room

## TRI LAYER TECHNOLOGY (TLT) TABLETOP PAD

- Comfortable with significant pressure management properties
- Radiolucent for minimal attenuation of fluoroscopic imaging
- Ultrasonic seam welded for fluid resistant properties
- Made of hypoallergenic material

## PRESSURE REDUCTION SYSTEM (PRS) SURGICAL TABLE PADS

- Offer excellent pressure management to reduce the potential for tissue damage and pressure ulcers while providing comfort for the patient
- Offer minimal attenuation of fluoroscopic X-ray for clear image quality
- Reduces the risk of disease transmission in the Operation Room (OR) by eliminating hook-and-loop material on pad
- Manufactured with ultra-sonically welded seams to prevent fluid intrusion
